

## 多重迴圈流程

### (A) 多重迴圈 - for loop :

### (B) 運作流程：

外迴圈執行順序	內迴圈執行順序
a = 1	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 2	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 3	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 4	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 5	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 6	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 7	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 8	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 9	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10
a = 10	b= 1, 2, 3, 4, 5, 6, 7, 8, 9 10

**(C) 語法：**

利用 for 敘述建構雙重迴圈的語法與範例如下。

語法：	範例：
<pre> for (a=1; a&lt;=10; a++) {     statement 1;     statement 2;     for( b=1; b&lt;=10; b++) {         statement 3;         statement 4;     } }                     </pre>	<pre> for (j = 1; j &lt;= 10; j++) {     System.out.printf(" ");     for (k = 1; k &lt;= 10; k++) {         System.out.printf("*");     }     System.out.print("\n"); }                     </pre>
